Opportunity

- For wafer manufacturing plant it takes about 18 months to commission the plant, **manpower is big constraint and technology risk is also there.** It is basically a metal crystallization and Diamond cutting tools technology combination business.
- **Solar Cell lines** are fully automated and can be built in one year time. It is a Chemical and Mechanical process and **requires highly skilled employees** to operate the plant. Technology risk is minimal and man power pool is growing in India itself.

The inaugurator speaking on the occasion said he was proud of Sri. C. T. Suresh owner Keonics computer education center Ranebennur who was an alumni of our college, has scaled to such great heights in his career. an Educational institution & has become a multi – millionaire In by his own effort. He has the ambitions of introducing ultra – modern technology in every educational institution, acquainted the coordinator C. A. Harihar.

Sri. C.T. Suresh: In his narrated his story of success started in 1989 when nobody had heard the word computer He started with amount Rs 1,00,000 & today he is providing training to 25,000 students every year & today I.C.T. is no longer alien word. It is strange that, he is training not just students but also professionals of various fields & includes the higher education fields. He also said about digital life and educational program and radical rethinking of the **human-computer interactive experience**. It integrates digital world (information & services) and physical world (physical objects/environment). It makes interfaces more responsive and proactive (objects & environments monitor user and proactively present information & services relevant to user's current needs/interests).

The program is to use information technology to augment physical environments and objects around the people that can draw attention. When one is walking around town, for example, the system, points out the buildings/places of particular interest to a user. The program is also to augment reality in order to provide a composite view for the participants: a blend of a real scene with the virtual scene that augments the digital environment with interactive information.

Digital Life is a multi-sponsor, Lab-wide research consortium that conducts basic research on technologies and techniques which spur expression as well as social and economic activity. They first explore the design and scalability of agile grassroot communication systems that incorporate a growing understanding of emergent social behaviours in a digital world; the second considers a cognitive architecture that can support many features of **“human intelligent thinking”** and its expressive and economic use; and the third extends the idea of inclusive design to immersive, affective, and biological interfaces and actions.
